Parties Involved	
WHO ARE YOU INVESTING WITH? - The Fund is a sub-fund of the Company. - The Management Company is FundSight S.A. - The Investment Manager and Global Distributor is Foord Asset Management (Guernsey) Limited. - The Singapore Representative and Sub-investment Manager is Foord Asset Management (Singapore) Pte. Limited. - The Depositary and Paying Agent in Luxembourg and the Administration and Registrar and Transfer Agent is CACEIS Bank, Luxembourg Branch.	Refer to <u>paragraphs 1 to 5</u> of the Prospectus for further information on the role and responsibilities of these entities and <u>paragraph 21.6</u> of the Prospectus on what happens if they become insolvent.
KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the shares in the Fund and the income therefrom may rise or fall. Investors may not realise the value of their initial investment. These risk factors may cause you to lose some or all of your investment:	Refer to <u>paragraph 8</u> of the Prospectus for further information on risks of the product.
Market and Credit Risks	
You are exposed to market and credit risks. The value of investments may be affected by uncertainties such as international, political and economic developments or changes in government policies. The Fund has exposure to debt instruments which are subject to the risk that issuers may default on payments. An issuer suffering an adverse change in its credit quality could lead to greater price volatility of the security. A lowering of the credit rating of a security may also affect the security's liquidity, making it more difficult to sell.	
Liquidity Risks	
You are exposed to liquidity risk. The Fund is exposed to the risk that an investment or position cannot be easily unwound or offset due to insufficient market depth or market disruption.	
Product-Specific Risks	
You are exposed to foreign exchange risk. The Fund and the Classes available to Singapore investors are denominated in USD. As the Fund's assets and liabilities may be denominated in currencies other than USD, the Fund may be affected by changes in currency exchange rates. The Investment Manager does not intend to hedge against currency fluctuations between SGD and USD. Singapore investors whose reference currency is SGD may therefore be exposed to this exchange rate risk. You are exposed to FDI volatility risk. The price of an FDI can be volatile as it may not completely correlate with their underlying security, interest rate, profit rate, currency or index. A small movement in the price of the underlying security, index, interest rate, profit rate or currency may result in a substantial movement in the price of the FDI. Swap agreements, which can be negotiated and structured to include exposure to a variety of different types of market factors, may increase or decrease the Fund's	

exposure to interest rates, profit rates, exchange rates or other factors depending on their structure. The most significant factor in the performance of swap transactions is the change in the interest rate, profit rate, exchange rate or other factors that determine the amounts of payments due to and from the counterparties.

It is currently not intended that the Fund enters into total return swaps, securities lending transactions, repurchase transactions or reverse repurchase transactions or any other securities financing transactions as defined by the SFT Regulation.

- **You are exposed to country risk.**

In emerging and less developed markets, the legal, judicial and regulatory infrastructure is still developing. Trading volume in emerging markets may be substantially lower than in developed markets, affecting the liquidity of securities. Investing in emerging markets is subject to risks of market suspension, restriction on foreign investment and repatriation of capital.

- **You are exposed to commodity risks.**

Commodity-linked or commodity-backed investments are exposed to credit risk of the issuer and risks associated with price moves in the related commodities markets, which can be volatile. Prices of commodity-linked or commodity-backed investments tend to exhibit a low correlation with the returns of traditional asset classes like stocks and bonds.
